

The Myocarditis Foundation

Helping save lives from sudden death

Each year thousands of young lives, like these, are lost suddenly and unexpectedly to the heart disease myocarditis. The Myocarditis Foundation is a nonprofit organization that works to advance research and spread awareness about this devastating disease.

What is myocarditis?

Myocarditis is a disease characterized by inflammation of the myocardium (muscular layer of the heart), which can lead to damage of the heart. Myocarditis is a poorly understood, often undiagnosed illness, which can rapidly progress to heart failure and death. The disease usually occurs in young, otherwise healthy people, yet anyone may be susceptible.
